

Blended Learning Rotation Model for Algebra 1 Class

Objectives:

- ★ CCSS.MATH.CONTENT.HSA.SSE.A.1
 - Interpret expressions that represent a quantity in terms of its context.*
- ★ CCSS.MATH.CONTENT.HSA.SSE.A.1.A
 - Interpret parts of an expression, such as terms, factors, and coefficients.
- ★ CCSS.MATH.CONTENT.HSA.SSE.A.1.B
 - Interpret complicated expressions by viewing one or more of their parts as a single entity. For example, interpret $P(1+r)^n$ as the product of P and a factor not depending on P .
- ★ CCSS.MATH.CONTENT.HSA.SSE.A.2
 - Use the structure of an expression to identify ways to rewrite it. For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$, thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$.

Rotations:

The below rotations will be practice during the first weeks of school. The rotations will not be based on Differentiated Instruction but rather on classroom management and expectations for each student during the station.
